

## QIMAROX CROSSRUNNER®

The Crossrunner is a unique system in which multiple Highrunner mk7 palletisers can be placed in line. The system consists of a roller conveyor for infeed and outfeed of both full and empty pallets. Thanks to its clever control system, multiple Highrunners can be controlled with only one Crossrunner, without interfering with each other. It is therefore no longer necessary to have a separate infeed and outfeed conveyor for each palletiser. The result is a compact and easily accessible set-up.

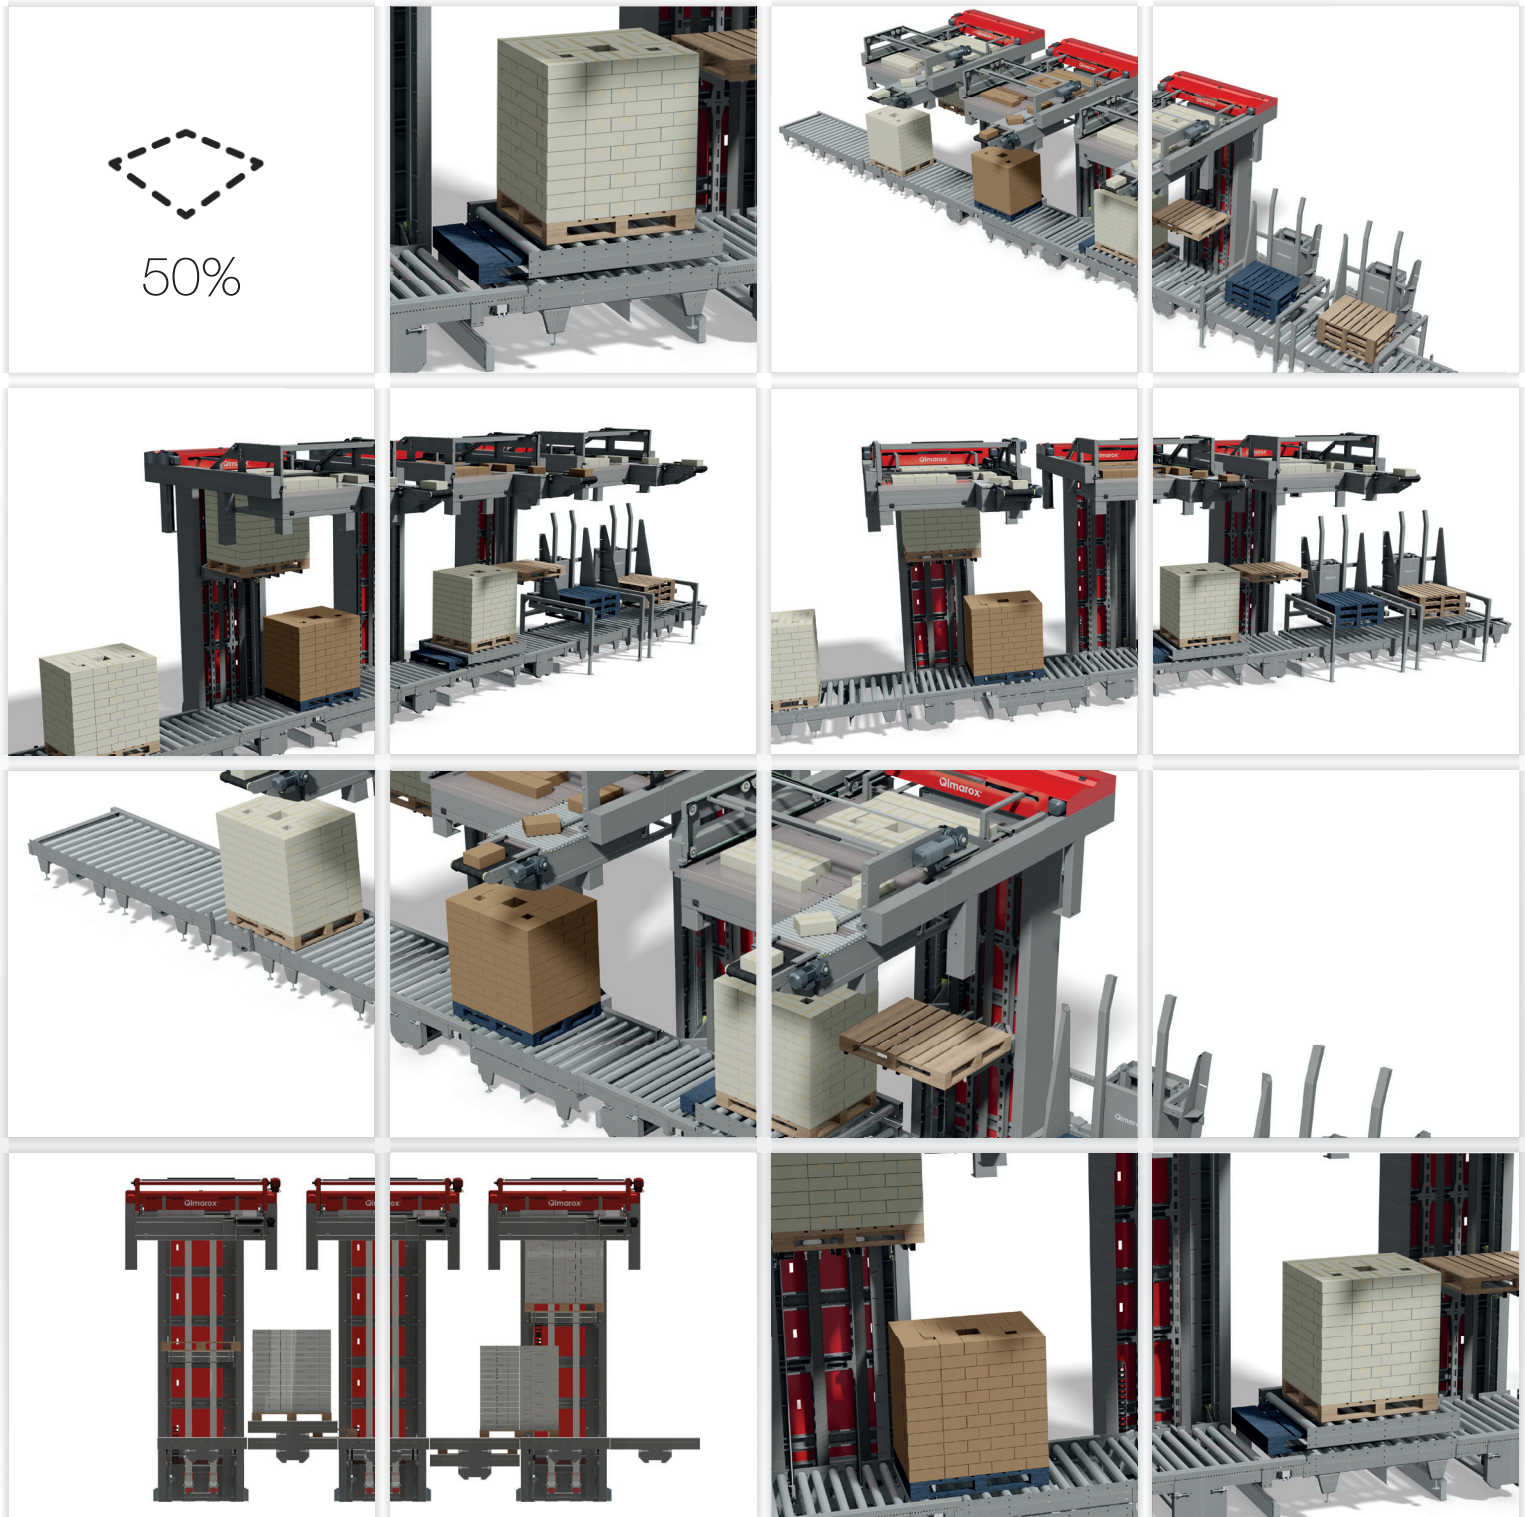

Key Components for material handling:

- Safety Fencing
- Vertical Conveyors
- Palletising Modules

## Benefits of the Crossrunner:

- Only one infeed and outfeed conveyor for
- Improved accessibility for service engineers
- Clever control system for unimpeded product flow
- Space saving up to 50%
- Compact set-up; pallets pass along the bottom of the unit
- Modular design for custom palletising installation

## Suitable for Highrunner mk7

The Highrunner Mk7 is a standard palletiser that excels in both simplicity and versatility. Its simplicity lies in its modular design and standardised control system, allowing any system integrator to easily integrate the machine into any end-of-line system. Its versatility is the result of its patented pattern-formation slider, which can place products in almost any stacking pattern, steplessly and with great accuracy.
